

Food Plot Planting

Overview

Food plots are an intensive management method with the goal of greatly improving forage available to wildlife. It has the additional benefit of creating an attraction point on your property where you will have greater success at finding wildlife, whether for hunting, photography, or viewing.

A good food plot has many requirements. The soil, season, crop selection, and planting methods must all come together in order to be successful.

Wildland Systems will overtake all aspects of sowing a healthy food plot. This entails soil testing, liming, fertilizing, plowing, sowing and weed control. Our goal is to build food plots that will satisfy your needs and give your wildlife a valuable resource.

If you are a do it yourself kind of landowner with the required equipment, we have got you covered as well. We will help you plan your food plot down to the finest detail, allowing you to do the work in confidence.

Summary

- Provide supplemental forage to wildlife
- Establishment of a food plot that will provide benefits for years to come
